RE: FAST Act LNG Allowance

Due to the FAST Act, an allowance of 2,000 lbs. is allowed on the tractor of a vehicle powered by Liquefied Natural Gas (LNG) on the Interstate system up to 82,000 lbs. The allowance could be on the drive axles, the steer axle, or a combination of both for a total of the 2,000 lbs. ITD will also honor this allowance on secondary highways.

The vehicle will not have to be registered for up to 82,000 lbs. or have an excess weight permit to get the allowance.

Attached is a picture of an LNG fuel tank to assist in the identification of such LNG powered vehicle combinations.

Thank you.
