

SH-13 East Kooskia Bridge

Your Safety ➤ Your Mobility ➤ Your Economic Opportunity

8-ton weight restriction now in effect

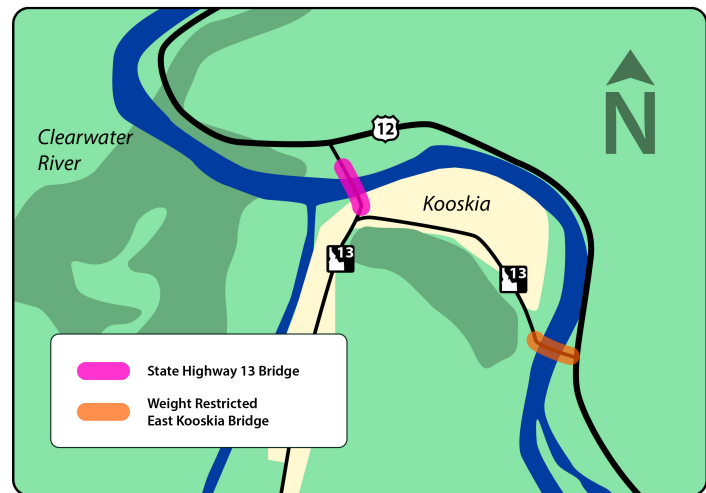

The Idaho Transportation Department reduced the East Kooskia Bridge weight restriction to 8 tons or 16,000 pounds vehicle weight on Sept. 11, 2026. The new posting replaces the previous axle-weight restrictions.

Alternate crossing

Heavy commercial vehicles over 8 tons must use the SH-13 Bridge, approximately one mile east.

Why is the bridge restricted?

Inspections show continued corrosion and deterioration of the bridge's steel components. The 8-ton restriction reflects its current safe carrying capacity and helps prevent additional damage.

Looking towards the future

ITD is evaluating potential solutions for the future of the crossing. Planning and alternatives analysis are funded, but design and construction are not. ITD will continue monitoring the existing bridge as planning moves forward.
