

# WELCOME

## PUBLIC MEETING

October 19, 2022

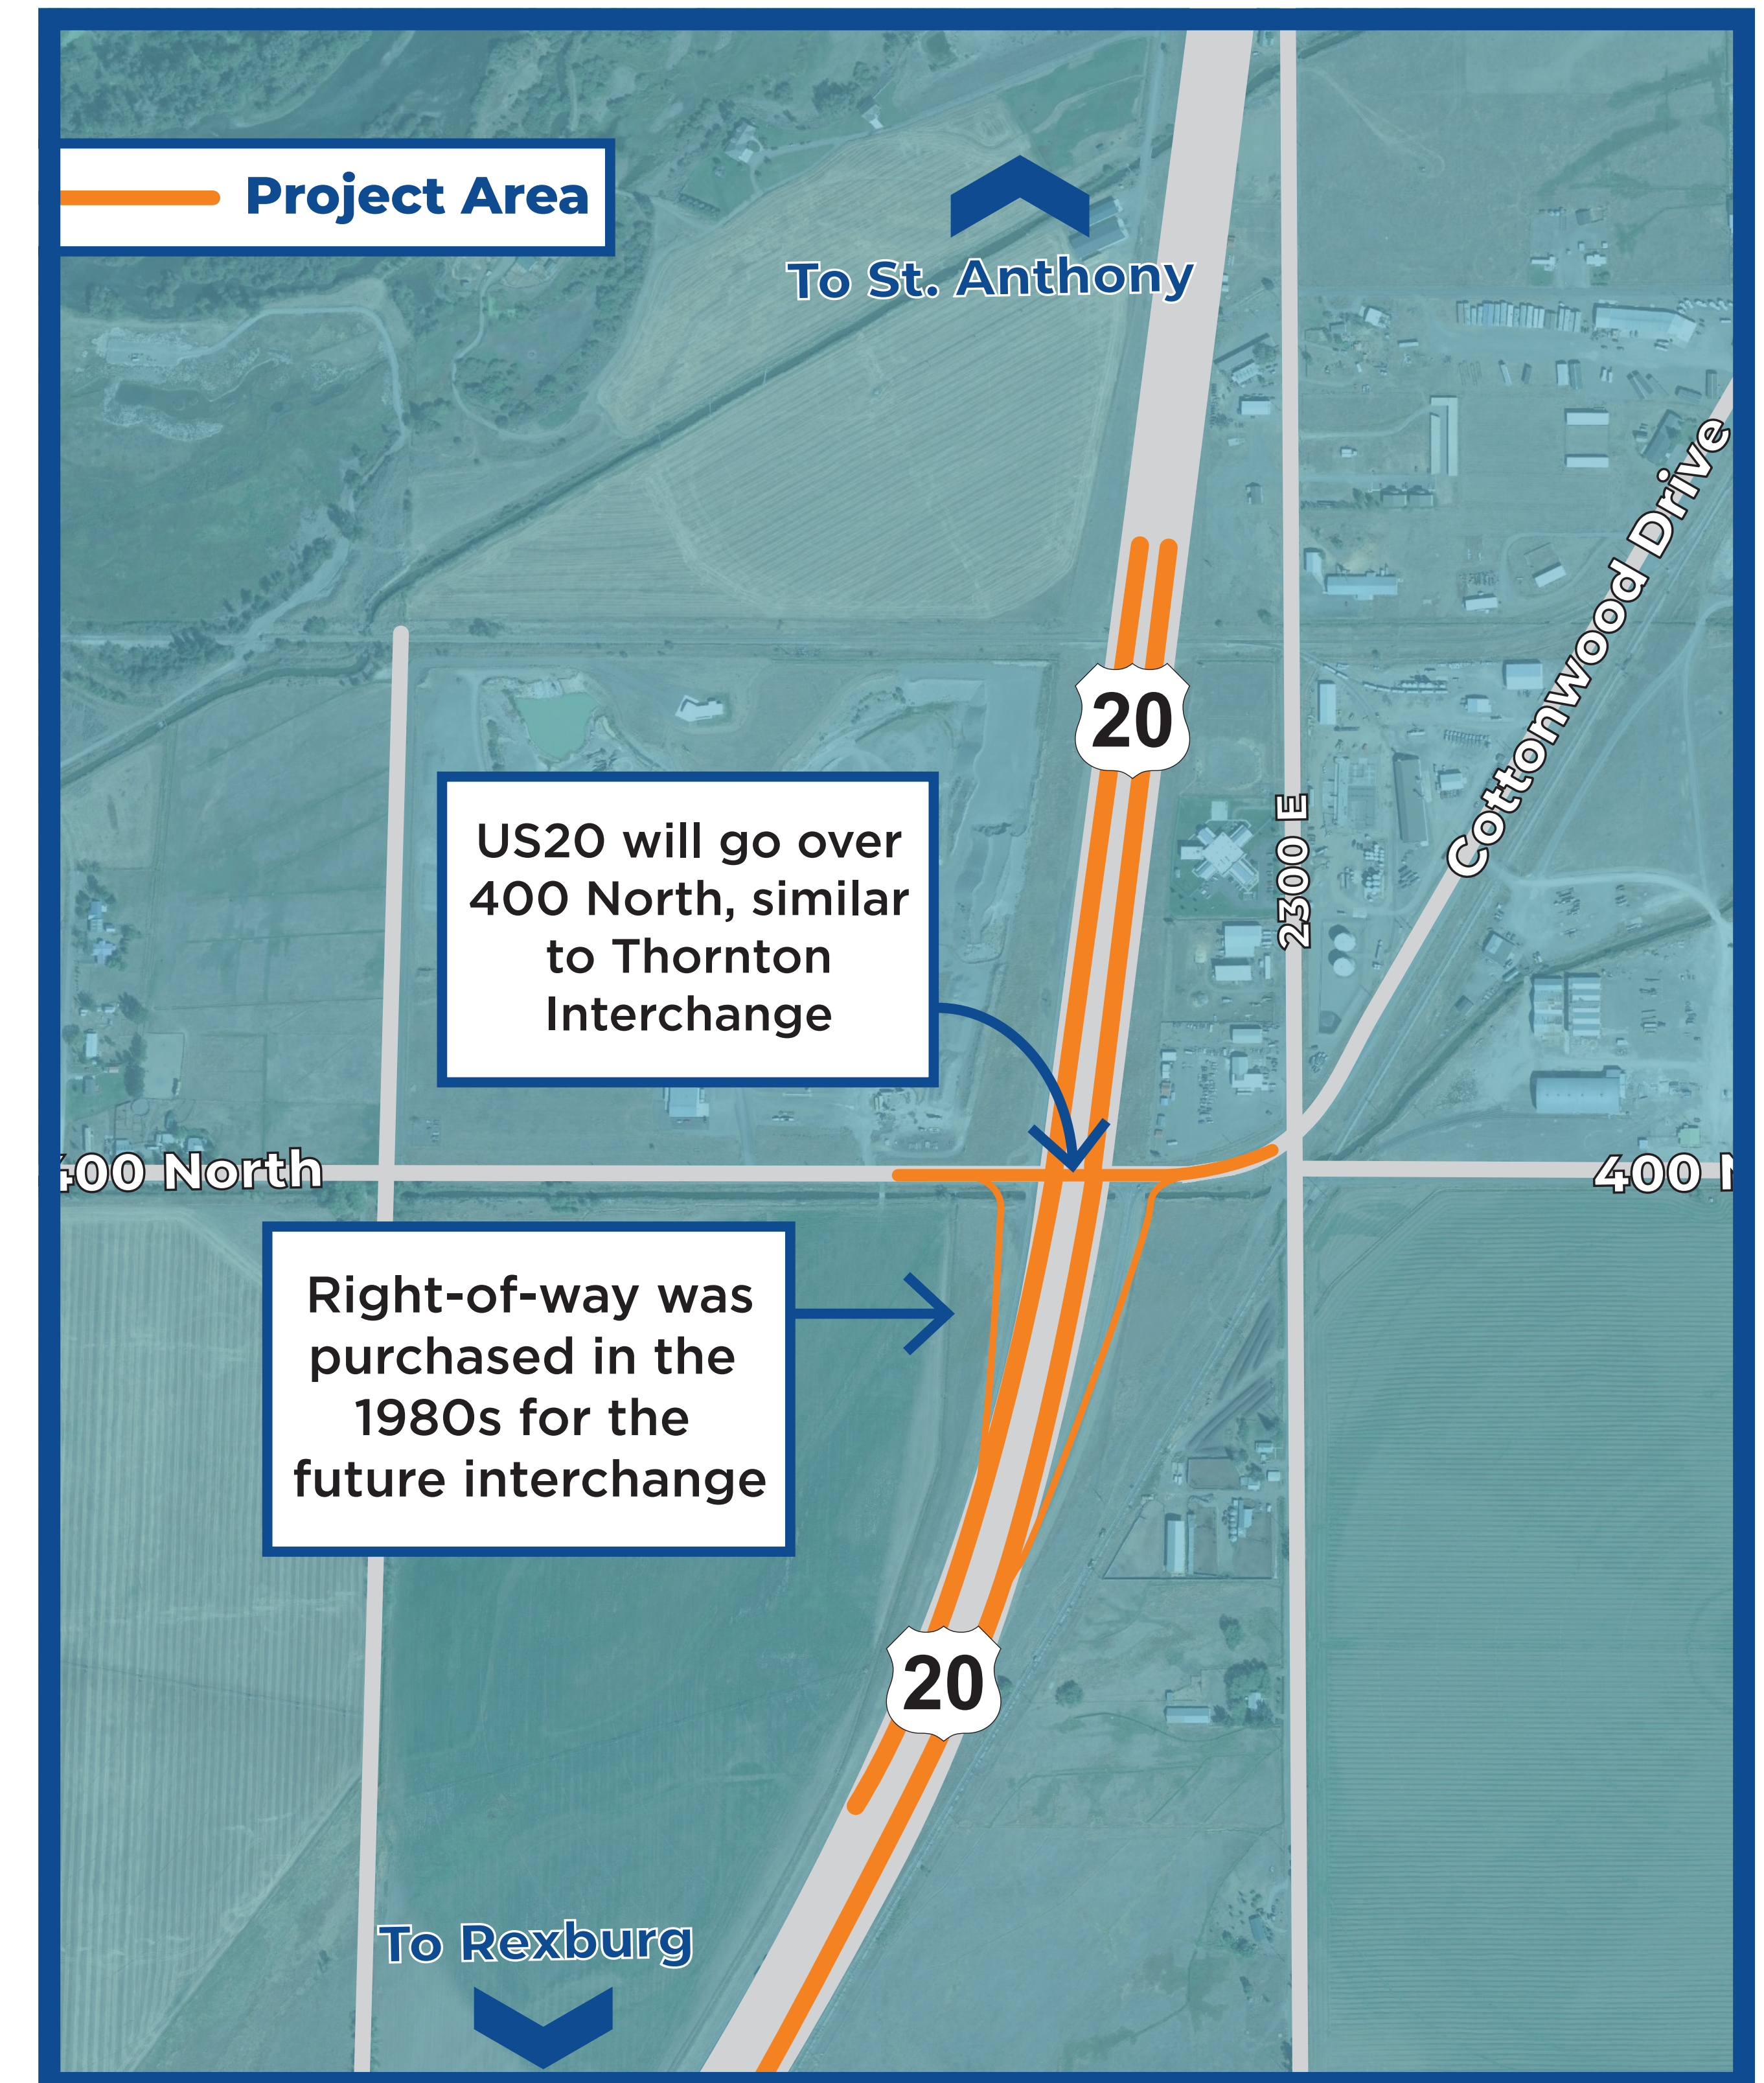

# PROJECT OVERVIEW

## South St. Anthony Interchange Design

An interchange at Exit 344 (E 400 N Road) south of St. Anthony has been in the Idaho Transportation Department's (ITD) plans since the early 1980s when US20 was constructed in its current location and configuration.

Right-of-way was purchased at that time, and conceptual layouts for the interchange ramps were explored. About ten years later, in 1991, a northbound off ramp was constructed at this location.

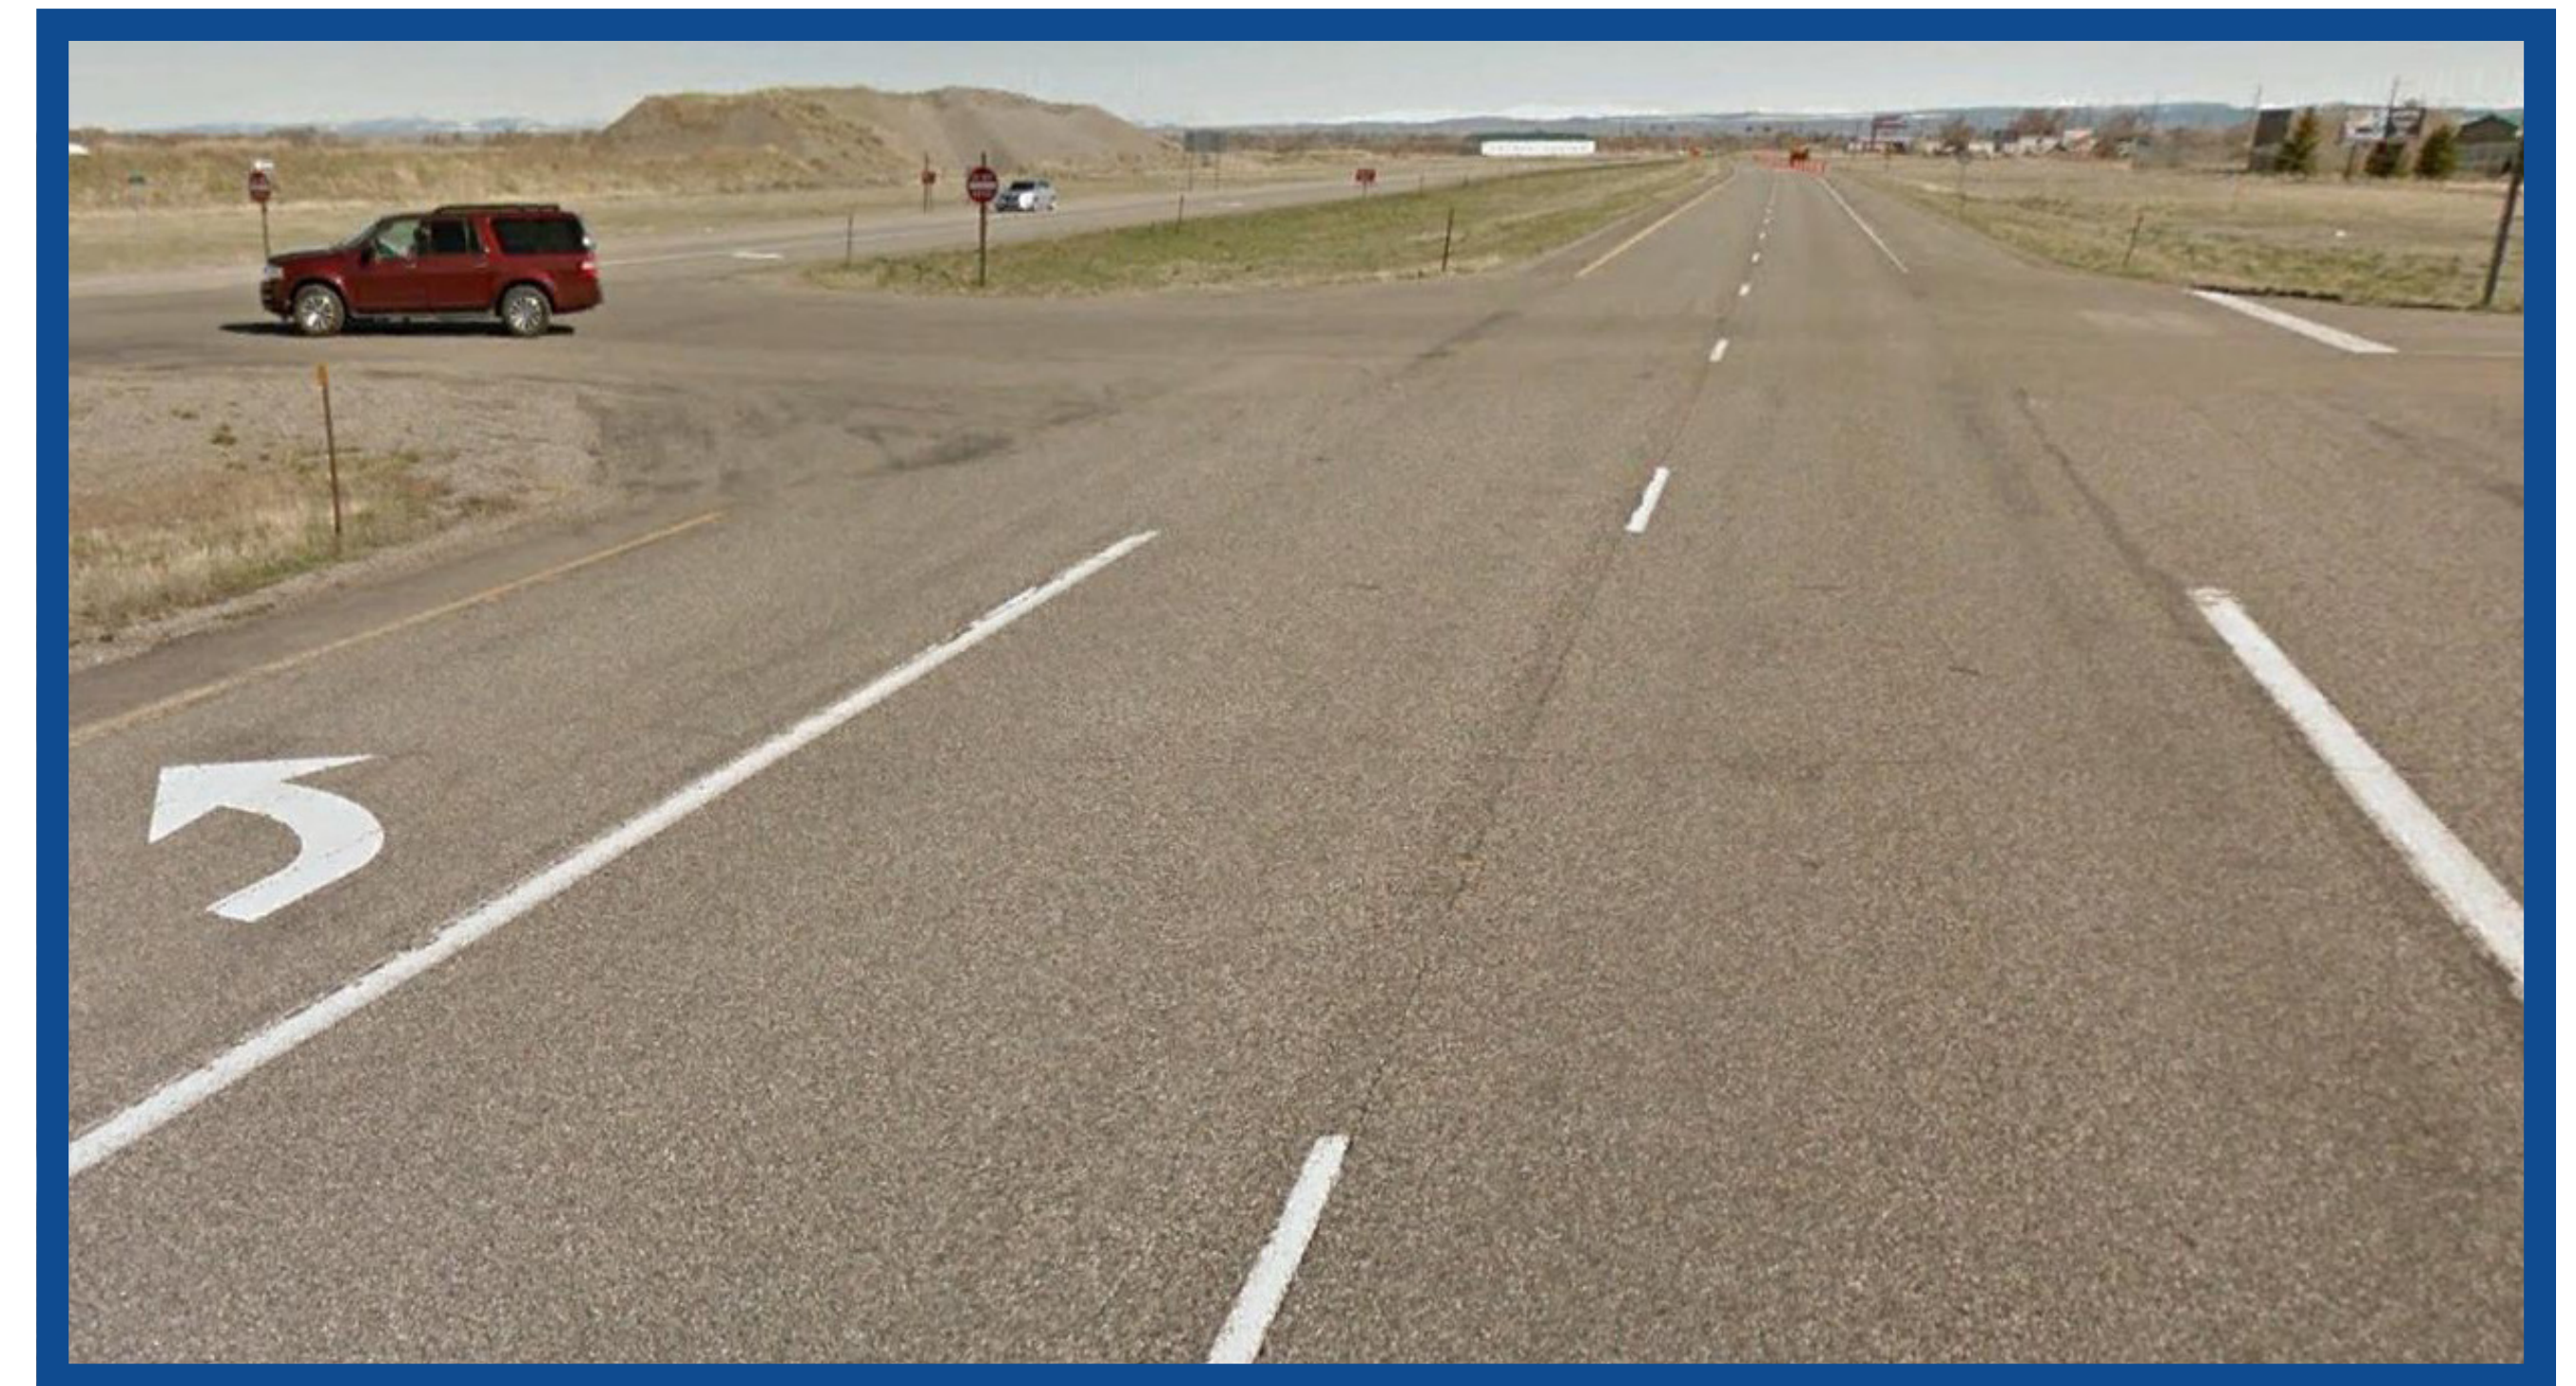

# PROJECT NEED

## South St. Anthony Interchange Design

As a result of traffic growth combined with safety needs, ITD has accelerated the design and construction of a tight diamond interchange at this location, very similar to the interchanges recently constructed at Thornton and Menan-Lorenzo.

**The project will provide increased capacity, mobility, and safety for the traveling public.**

# PROJECT FUNDING

## South St. Anthony Interchange Design

The environmental review and design is funded through Governor Brad Little's Leading Idaho Program, which allows critical infrastructure improvements to be advanced ahead of the traditional development timeline. Construction is not yet funded, and dependent upon available funding at the time the project is delivered for construction advertisement.

---

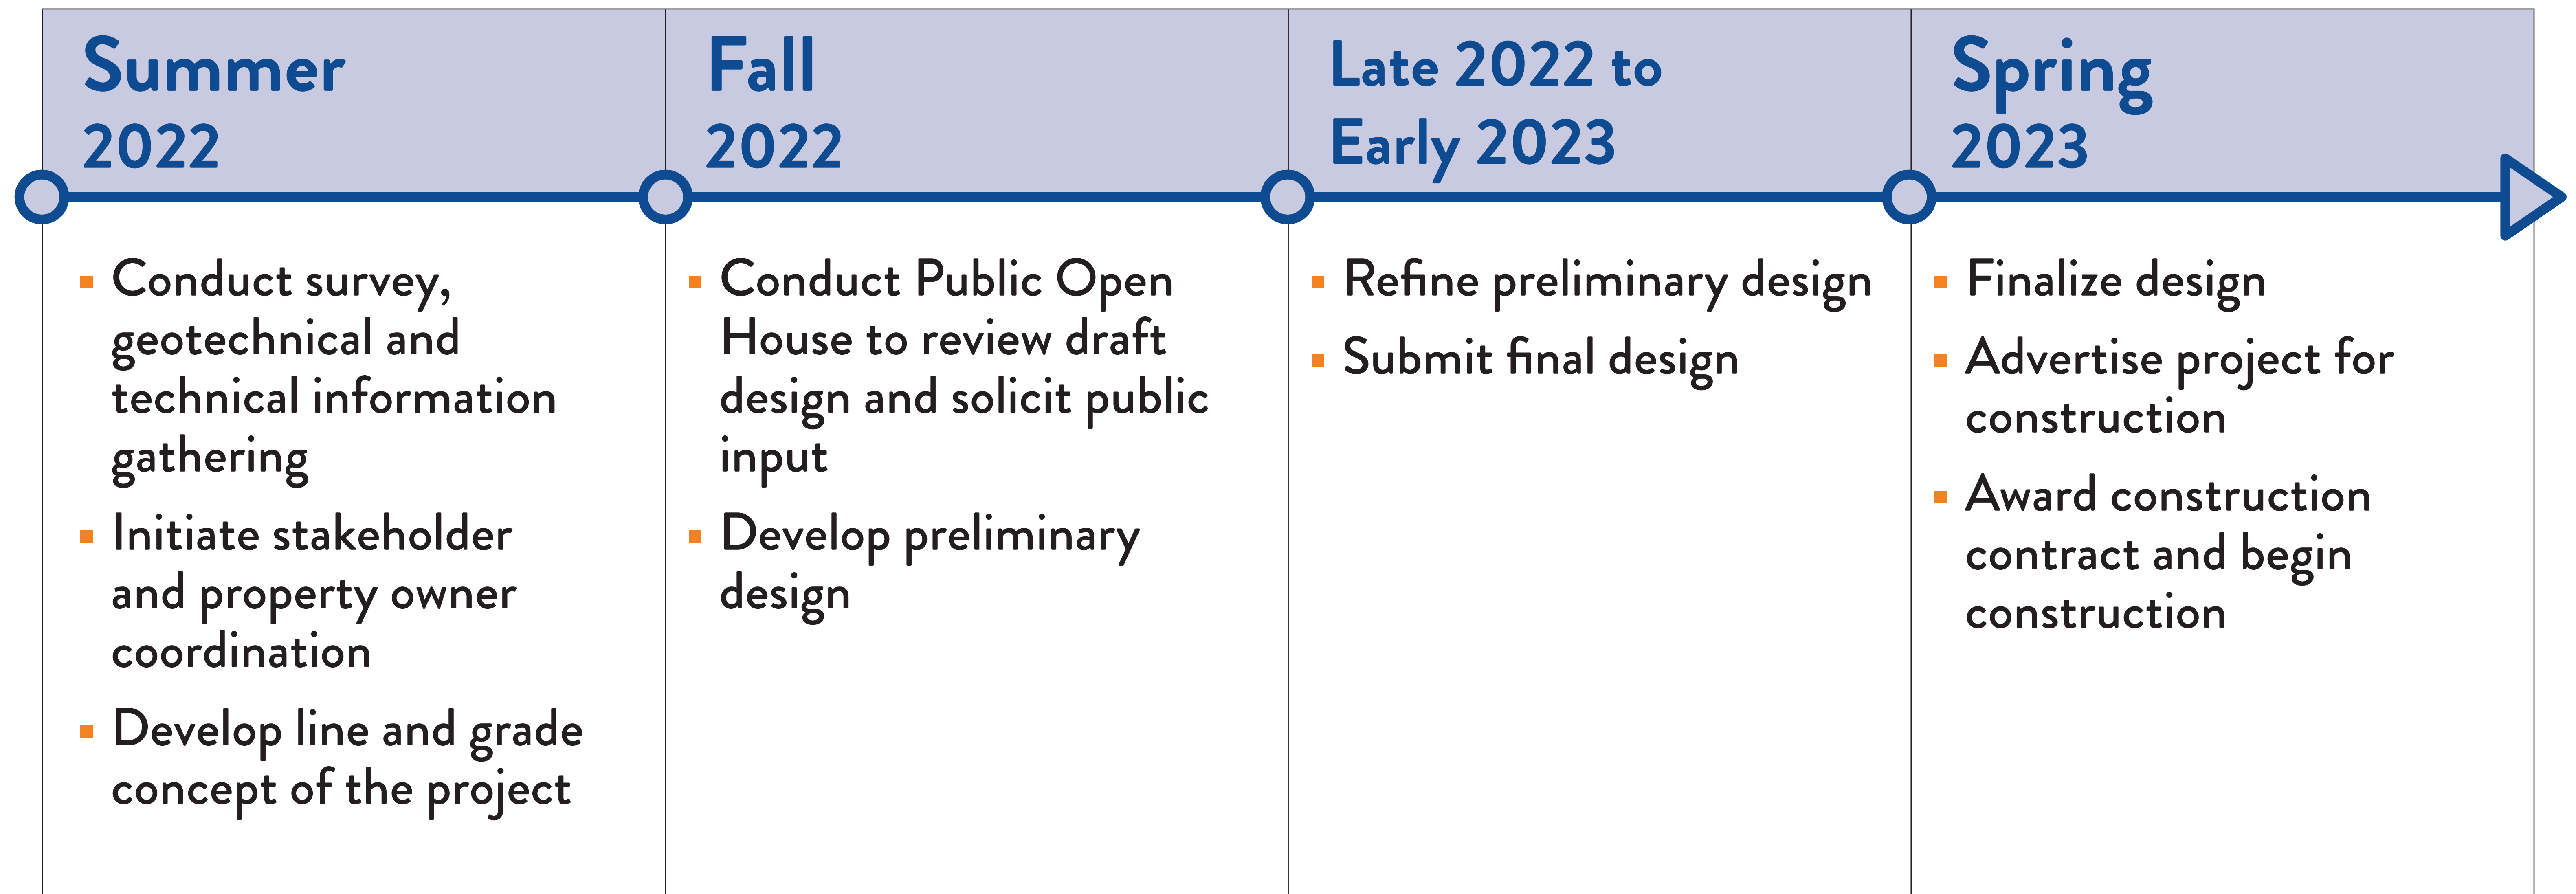

**The project is  
funded 100% with  
State funds for  
environmental  
and design.**
