

# US-20 Arco to Idaho Falls

The Idaho Transportation Department is making plans to improve US-20 between Idaho Falls and the US-26 Junction. The recommended plan includes first constructing two additional lanes, then reconstructing the existing 2-lane road to provide continuous passing opportunities. This would result in a 4-lane divided highway.

Turnaround locations will be added throughout the corridor to allow motorists to go the direction they need to go while reducing the safety concerns of left-hand turns across the highway. The turnaround areas will allow a tractor trailer to occupy the space between the two directions of travel.

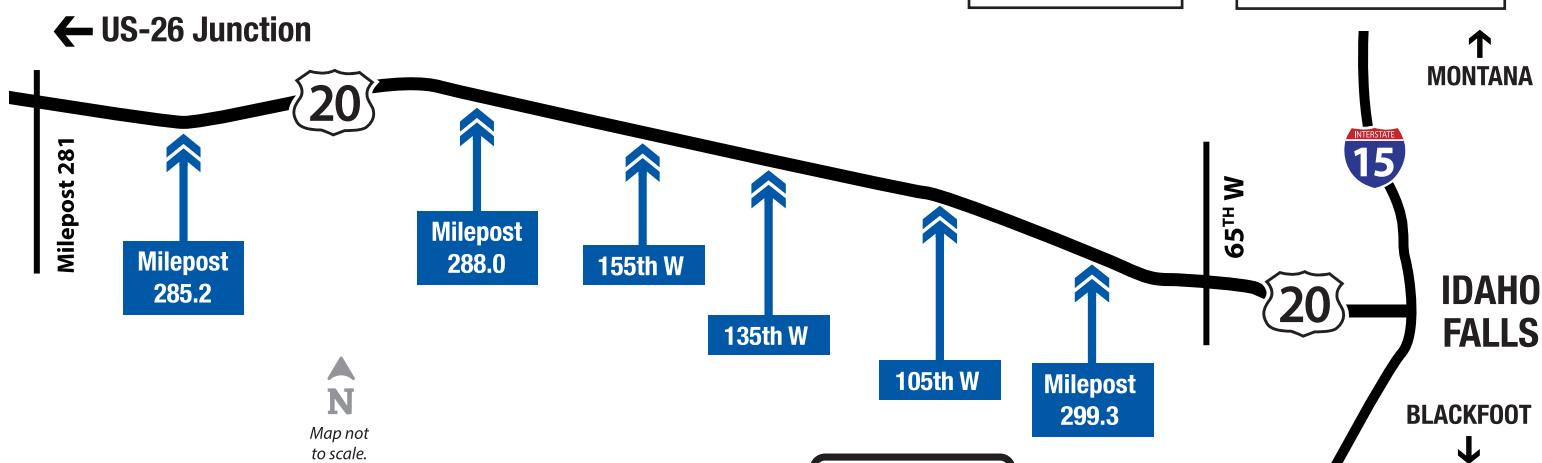

## Proposed turnaround locations between Milepost 281 and 65th W

A deceleration lane will allow cars to safely slow down and get into the turnaround area.

A wide, painted median will separate opposing traffic.

Motorists will stop at the stop line until it is safe to proceed forward or turn left.
